Collamatic P 40

**easy, fast
and clean!**

Collamatic P 40 is a new concept of glueing machine it uses a special cold glue, almost odourless. Two prints are glued together back to back and pages are straight. It is fully automated : prints, already creased and folded in the centre, have to be loaded in sequence in the automatic feeder.

Collamatic P 40 works with a disposable tray and only 2 rollers in contact with glue, maintenance is very easy, fast and clean. This glueing machine is best-able to make thin albums like parents' albums in sizes from 20 x 20 cm (8 x 8 inches) up to 40 x 40 cm (16 x 16 inches). Productivity: it glues about 300 prints per hour.

Dimensions: Lenght 120 cm, Width 80 cm, Height 70 cm Weight: 100 Kg
Voltage: 220/230V Power: 200W during working process. UPS unit is suggested.
