INTRODUCING

ATECH HANDI

MANUAL LAMINATING TOOLS

THE HANDI LAMINATOR

The Atech Handi Manual Laminating line of tools are a great addition to any sign or print shop, even with a powered laminator. They are not intended to replace a laminator, but they do make it easier to laminate small graphics and can reduce waste by not having to change the roll on a laminator just to do an odd job.

All of our tools will laminate and mount pressure sensitive vinyl. The different sizes and types of tools make it possible to choose the right tool for the job. Sign makers and graphic houses will benefit by having a variety of tools to work with.

The fabric on all of the tools are easy to replace when they get soiled, cut or worn out. There are five styles and many sizes to fit the needs of most sign shops.

The HANDI Rivet Tool

These tools are for use on small signs that don't require the graphic to be rolled up to make them easy to handle.The Atech Rivet Tool has a padded edge with felt for going over obstacles such as rivets. Their lightweight and slim design make them easy to work with on small signs. The slim felt edge will apply application tape and vinyls.

The HANDI Small Sign Tool

These tools are for use on small signs that don't require the graphic to be rolled up to make them easy to handle. The Atech Small Sign Tool has a cotton covered edge for laminating. Their light weight and slim design make them easy to work with on small signs. The slim felt edge will apply application tape and vinyls.

The HANDI Laminator Tool

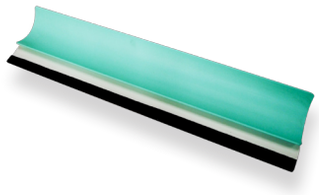
The laminator tool has a roll holder for holding rolled up materials to make them easier to handle. This tool is used for graphics that are otherwise to long to handle unless they are rolled up.

The Laminator Tool comes in sizes from 26" to 64". It is primarily used for working with prints. It will mount cut vinyl but is lacking in the application of masking tape, It can be done but the other tools are better designed for applying transfer tape.

The HANDI Cut Vinyl Tool

The Cut Vinyl Tool looks very much like the laminator tool with the addition of black felt covering on both edges. Designed to work primarily with cut vinyl, it will apply transfer tape both by pushing the roll ahead of the tool or by placing the roll in the roll holder and applied off the back of the tool.

This is the "jack of all trades" tool because it does it all. It comes in two sizes and is limited to 30" width of application.



The HANDI Cradle Tool

The Cradle tool is the latest addition to the Atech Handi range of laminating tools. It is lightweight and is pushed without the need to pick it up. It does very well with application tape and is available in all the sizes of the other tools.
